S.N. 09/556,157 Page 2

Art Unit: 3673

## In the Claims

## Please amend the claims as follows:

1. (Second amended) Apparatus for supporting a body part, comprising: a rest member for said body part; an expandable member associated with said rest member; and means for expanding said expandable member upwardly and forwardly at an angle with respect to a base of said expandable member, with said body part on said rest member.

- 2. (Second amended) Apparatus as defined in claim 1 further including an auxiliary surface associated therewith.
- 3. (Amended) Apparatus as defined in claim 2 wherein said body part is a foot positioned on said rest member in the non-expanded position of said expandable member.
- 4. (Amended) Apparatus as defined in claim 2 wherein said body part is an arm positioned on said rest member.
- 5. (Amended) Apparatus as defined in claim 1 wherein said rest member is a platform that is supported by a tubular member.
- 6. (Amended) Apparatus as defined in claim 5 wherein said platform is configured to said body part when said rest member is in the non-expanded position of said expandable member.
- (Second amended) Apparatus as defined in claim 1 wherein said expandable
  member is selected from the class consisting of <u>externally reinforced</u> bellows and
  scissors mechanisms.
- 8. (Second amended) Apparatus as defined in claim 7 wherein said expandable member is adhered to a portion of said platform.
- 9. (Originally presented) Apparatus as defined in claim 1 wherein said means for expanding includes means for inflating said expandable member and further including a safety guard therefor.
- (Originally presented) Apparatus as defined in claim 9 wherein said means for inflating comprises a compressor.

S.N. 09/556,157 Art Unit: 3673

- 11. (Second amended) The method of supporting a body part for transfer, comprising the steps of:
  - (a) positioning said body part on a [rest] <u>rigid</u> member <u>at rest;</u>
  - (b) expanding said rest member by a bellows to an inclined elevation with said body part supported thereon; and
  - (c) transferring said body part from said rest member.
- 12. (Second amended) The method of claim 11 further including the step of expanding against said <u>rigid</u> rest member in association with a bed.
- 13. (Amended) The method of claim 11 wherein the positioning step includes positioning a foot <u>upon</u> said <del>rest</del> member.
- 14. (Originally presented) The method of claim 11 wherein the positioning stepincludes positioning an arm on said rest member.
- 15. (Amended) The method of claim 11 further including the step of expanding against said rest-member by a compressor.
- 16. (Second amended) The method of fabricating apparatus for supporting a body part comprising the steps of:
  - (a) providing a pivotal-platform supportable by a tubular member pivotally attached thereto configured to said body part; and
  - (b) associating an expandable member with said platform.
- 17. (Cancelled).
- 18. (Amended) The method of claim 17 36 further including the step of providing means for angularly inflating said bellows.
- 19. (Originally presented) The method of claim 18 further including the step of providing a valve for inflating said bellows.
- 20. (Originally presented) The method of claim 19 further including the step of providing means for attaching a compressor to said valve.

S.N. 09/556,157 Art Unit: 3673

21. (Second amended) A system for assisting a person [having] to have a lower limb [into adopting] adopt a reclined position from a sitting position, comprising

a surface upon which a <u>said</u> person is <u>to be seated</u>; and [to recline; and means for transferring the person to said surface, comprising]

means for elevating [a] <u>said</u> lower limb of said person to a level permitting the transfer of said [person to said surface with said] lower limb [in] <u>to</u> a reclined position <u>on said surface</u>.

- 22. (Originally presented) A system as defined in claim 21 wherein said surface comprises a bed.
- (Originally presented) system as defined in claim 22 wherein said bed includes a mattress.
- 24. (Amended) A system as defined in claim 21 wherein the means for transferring is positioned on a <u>floor-based</u> platform.
- 25. (Originally presented) A system as defined in claim 24 further including a support for said lower limb.
- 26. (Amended) A system as defined in claim 25 further including means for continuously elevating said support with respect to said platform.
- 27. (Originally presented) A system as defined in claim 26 wherein said means for elevating elevates said support and permits the transfer of said lower limb to said surface.
- 28. (Amended) A system as defined in claim 27 wherein said support is depressible in level condition to the vicinity of said platform after said lower limb has been transferred.
- 29. (Originally presented) A system as defined in claim 28 wherein said elevating means is switch-actuatable.
- 30. (Originally presented) A system as defined in claim 29 wherein said elevating means is selected from the class of manually and automatically powered devices.

S.N. 09/556,157 Art Unit: 3673

- 31. (Amended) A method for assisting persons <u>seated</u> [into adopting a reclined position] on an elevated surface comprising the steps of:
  - (a) positioning a <u>seated</u> person's lower limb on <u>bellows</u> means for elevating said lower limb;
  - (b) elevating said lower limb with said person remaining seated; and
  - (c) transferring said <u>elevated</u> lower limb to said elevated surface.
- 32. (Originally presented) A method as defined in claim 31 wherein said means for elevating said lower limb adjoins said elevated surface.
- 33. (Originally presented) A method as defined in claim 31 wherein said person is wheeled to said means for elevating said lower limb and the foot of said lower limb is positioned thereon.
- 34. (Originally presented) A method as defined in claim 31 wherein said lower limb is elevated to substantially the level of said elevated surface.
- 35. (Amended) A method as defined in claim 34 wherein said [disabled] lower limb is transferred to said elevated surface such that said person can adopt a reclined position.
- 36. (Replacing claim 17) The method of fabricating apparatus for supporting a body part comprising the steps of:
  - (a) providing a pivotal platform configured to said body part; and
  - (b) associating an expandable member with said platform; further including the step attaching a bellows to said platform to serve as said expandable member.
